

**Datum**®

## **Conflict Minerals policy**

Datum Alloys is committed to the responsible sourcing of materials throughout its supply chain. Conflict minerals are those that have potentially originated in the Democratic Republic of Congo (DRC) and its surrounding areas and whose trade could be used to fund armed conflict and human rights violations. Tin, tantalum, tungsten and gold (3TG), together with their ores, are commonly referred to as conflict minerals regardless of their country of origin.

Datum does not knowingly source any products that have originated in the DRC or its neighbouring countries. As part of this policy Datum conducts a country of origin enquiry on the products it manufactures and sources that may contain any of 3TG and requires its suppliers to provide a statement indicating where these materials have originated. Datum also expects its suppliers to have in place a system to trace the origin of 3TG.
